

**Section 601-BFW vs.  
NE 6100-6200 (Antevs, 1922)**

**Site 601-BFW-N: Match of varve stratigraphy at section 601-BFW-N south of Hogan Hill with New England Varve Chronology of Antevs (1922).**

Measured varve sections in the vicinity of Commissary and Little Commissary Brooks.

**Match of varve sections in Commissary and Little Commissary Brook area with New England Varve Chronology of Antevs (1922).**

Projected profile (parallel to horizontal grid lines on previous page) of Commissary and Little Commissary Brook area varve sections and stream bed geology. Colors indicate different 20-yr spans of the New England Varve Chronology. Section 602 is in the late 5900's and rests on till on a high bedrock promontory. The varve stratigraphy at 602 has not been included in the color scheme. The sections depict draping of the valley side by varves and also a generally thickening of varves toward the center of the valley.
